ANNUAL

REPORT

U. S. DEPT. OF AGRICULTURE NATIONAL AGRICULTURAL LIBRARY RECEIVED

Foreword

This publication is a statistical report of some of the accomplishments in 1968 under the various programs administered by the ASC State and County Committees. These programs are listed in the table of contents.

The programs are administered in each county by a county committee comprised of three elected farmers and the county agricultural extension agent. There is an ASCS office in each county in the State with an office manager and staff in charge of the day-to-day operations. The county committee meets periodically as it deems necessary and establishes policies and guidelines for the office manager, makes determinations as required by law and regulations, hears appeals of farmers and exercises administrative supervision.

ASC committees and offices have many responsibilities and perform many functions that cannot be measured statistically. Therefore, it is hoped that this report will stimulate further inquiry for those looking through it who are not familiar with these programs and the way they are administered.

Oregon State ASC Committee

Martin H. Buchanan - Chairman

W. Truscott Irby - Member

Horace H. Myers - Member

Gene M. Lear - Member (Extension Service)

Administration

State

ASCS administration in the state is under the direction of a State Committee composed of three farmers appointed by the Secretary of Agriculture and the Director of the Agricultural Extension Service who is a member ex-officio.

For administrative purposes the state is divided in five areas each under the supervision of a farmer fieldman.

The state office is managed by a state executive director who is responsible to the State Committee. In Oregon there are 19 persons on the state office staff, including the state executive director, program specialists, farmerfieldmen, administrative staff and clerks.

County

ASCS administration in each of Oregon's 36 counties is directed by a county committee composed of three elected farmers and the agricultural extension agent who is a member ex-officio.

Each county is divided into communities and for each community there is a committee of three farmers elected by the farmers of the community. The community committeemen elect the county committee. In addition community committeemen counsel with the county committee regarding program acceptance and operation. These committees meet two or three times during the year to acquaint themselves with program changes and developments. There are 618 ASCS community committeemen in the state's 206 communities.

The county committee is responsible for the overall administration of the ASCS programs in the county. It meets once or twice a month to discuss and outline policy, to render decisions in the carrying out of policy, to hear appeals, etc. Each office is under the day-to-day direction of an office manager, selected by the county committee. The office manager hires the clerical assistance necessary to carry out his responsibilities.

As of December 31, 1968, there were 28 office managers for the 36 counties in the state. Total office staff including the office manager was 107 persons. The cost of administration of county offices for the calendar year 1968 was \$1,002,994.

Committee Elections

Community Committeemen

The elections for community committeemen for 1968 were held September 16, 1968. 11,137 farmers voted in 206 communities in Oregon to elect 618 regular committeemen and 412 alternates. Of these 200 are serving for the first time.

County Committeemen

Under a system instituted in 1967 all regular community committeemen meet in a county convention to elect the county committeemen. There are three county committeemen in each county who serve for terms of three years with one term expiring each year. The county convention, therefore, elects one committeemen each year. It also determines each year who will be Chairman, Vice Chairman and regular Member. Two alternate county committeemen are also elected; they serve when there is a vacancy in the regular committee. A county Extension Agent is a member or each county committee by virtue of his office.

In 1968 eleven of the 36 county committeemen elected are serving for the first time.

The Agricultural Conservation Program is an important part of a coordinated effort to help farmers attain soil and water conservation objectives. The total effort includes research, education, technical assistance, cost-sharing, and such indirect aids as credit.

Since the beginning in 1936, ACP has operated as a farmer-Government partnership by providing a share of the cost of approved soil and water conserving practices. ACP cost-sharing is made available for conservation over and above what farmers would carry out with their own resources and on their own initiative. Participation in the program is voluntary and all farmers are eligible.

The ACP is developed by the Agricultural Stabilization and Conservation County and State Committees in co-operation with representatives of the Soil Conservation Service, Forest Service, Extension Service, Soil and Water Conservation District Supervisors, and other agricultural agencies.

Federal cost-sharing payments made to Oregon farmers in connection with conservation practices carried out under the regular ACP during the years 1936 to 1968 inclusive, total about \$82,300,000. Since substantially more than half the costs are borne by the farmer, it is estimated that during this period over \$165 million were expended in Oregon by the farmers and the Government on regular ACP practices. This represents a significant contribution to the conservation and improvement of Oregon's soil and water resources.

The emergency measures shown above represent conservation practices performed to alleviate the effects on rangeland of an extended drought in these counties during the spring and summer of 1968. Emergency funds were provided to offer cost-sharing for range-water developments to permit better grazing distribution and avoid overgrazing at the few locations where water was available.

Cropland Adjustment Program

The Cropland Adjustment Program was authorized under the Food and Agriculture Act of 1965 and was available to farmers for the first time in 1966.

The CAP provides for long-term retirement of cropland from specified crops determined to be in surplus supply. Provision is also made for the retirement of tame hay lands in some situations. In Oregon, the crops designated in 1966 were wheat, corn, grain sorghums, and barley. In 1967 only wheat and corn were designated. Participating farmers signed five to ten year agreements to divert all of the farm allotment or base for at least one of these crops. The acreage being diverted must be withdrawn from any agricultural production and maintained in an approved conservation use for the period of the agreement. Participants receive an adjustment payment for the acreage diverted and cost-share assistance for establishing the necessary conserving use. The adjustment payment is related to the productivity of the farm and the crop being diverted.

Cropland Conversion Program

Following the expiration of the Soil Bank Act in 1960 several land use adjustment programs were authorized by Congress on a pilot basis. All were directed generally at converting cropland into other more needed uses such as recreation, wildlife habitat, permanent vegetation and trees. These cropland conversion programs were approved in selected States and counties to test various combinations of payment rates and contract provisions.

In Oregon, Morrow and Umatilla Counties were selected for a trial CCP for 1965. A limited number of 5-10 year agreements were accepted. The agreements called for designation of specific cropland which could not be harvested but could be grazed. A corresponding reduction in the average acreage of row and grain crops was required. All of the designated acreage in these counties was converted to permanent cover.

Data for the agreements approved are shown below.

County	Number of Agreements	Number of Acres	Annual Payments
Morrow Umatilla	8 23	1,468 1,863	6,544 4,279
Totals	31	3,331	10,823

Conservation Reserve Program

The Conservation Reserve Program was a part of the Soil Bank Program enacted in 1956. It was essentially a cropland retirement program operating through voluntary contracts with farmers ranging from three to ten years in duration.

1960 was the last year in which new contracts were written. These Conservation Reserve contracts required the designation of a specific acreage of cropland which could not be grazed or harvested, and which would be devoted to a conserving use. A corresponding reduction in the acreage of most annual crops on the farm was also required. In return the farmer received an annual rental payment for compliance with the contract and cost-share assistance for establishing an approved conservation use on the designated acreage.

On the following page is a table listing basic data for all contracts in effect during 1968.

Commodity Loan and Purchase Agreement rogram

Commodity loans and purchases are one phase of the Frice Support Frogram designed to help stabilize the agricultural economy and to provide a means for more orderly marketing of certain commodities.

In Oregon - wheat, barley, corn, oats, and honey were the commodities which received price support through loans and purchases.

Producers of the price supported commodities may apply for loans based on specific price support rates providing the commodities meet certain requirements. The support value of commodities under loan or purchase agreement remains constant regardless of market fluctuations. This allows the producer a choice in marketing his commodity; to forfeit the commodity at the price support value in satisfaction of his loan or to repay the loan and sell on the open market, whichever is to his advantage. The producer may also delay the final decision by requesting extension of the maturity date of his loan.

The following pages of this section outline the activity under the program for the 1968 crop year through February 28, 1969.

Farm Storage Structure and Dryer Equipment Loan Program

The storage and dryer equipment loan programs are a supplement to the commodity loan and purchase program.

Storage loans are available to producers of crops eligible for price support for the construction of farm facilities to store these crops. Generally, loans are limited to 85 percent of the out-of-pocket cost of construction and are repayable in four equal annual installments at a per annum interest rate of four percent. The construction of these facilities allows the producer to store his grain after harvest and to market the grain at the time of greatest advantage rather than being forced to market at harvest time when prices are usually lowest.

Dryer equipment loans are available to those producers who have capacity for storing price supported crops and provide a means for conditioning the grain for safe storage. Dryer loans are limited to 85 percent of the cost and are repayable in three equal annual installments at a per annum interest rate of four percent.

The following page outlines the activity under this program.

Feed Grain Program

The program was voluntary and operated under the authority of the Food and Agriculture Act of 1965. The national goal was to reduce overproduction and strengthen prices by diverting 30 million acres of corn and grain sorghum into approved conserving uses. Participating farms contributed to the national goal by diverting 20% of the farm feed grain base. Farm income was maintained by U. S. average loan rates of \$1.05 per bushel for corn and \$1.61 per cwt. for grain sorghum. In addition, the farm yield multiplied by price support payments of 30 cents a bushel for corn and 53 cents a hundredweight were made on the acreage planted for harvest. This acreage was limited to the smaller of the permitted acreage or 50 percent of the base. The price support payment earned was determined according to the crop planted.

Farms with an effective base of 25 acres or less earned a diversion payment for diverting 20% of the feed grain base. This payment was equal to one-fifth of the total county support (loan rate plus price support payment rate). Farms with an effective base in excess of 25 acres did not earn a payment for the 20% diversion.

Farms diverting acres in excess of 20% of the feed grain base received diversion payments for the additional acres up to a total of the larger of 25 acres or one-half of the feed grain base. This diversion payment was 45% of the total price support rate for the county.

Producers qualified by signing an intention to participate in the program and: (1) diverting at least 20% of the farm feed grain base from production; (2) complying with diversion as indicated during sign up; and (3) increase the conserving use on the farm by the number of acres diverted from the production of feed grain. Producers were permitted to substitute feed grain for wheat if no barley or oat-rye bases were established.

Data for the feed grain program by counties are shown on the following page.

Wheat Program

The program was voluntary and operated under the authority of the Food and Agriculture Act of 1965. A national allotment of 59.3 million acres was established to insure enough wheat for current needs and to provide an adequate reserve. Farm income was maintained by a price support of \$1.25 per bushel (U. S. average) for loans and purchase. The wheat price was supplemented with domestic wheat certificates valued at \$1.38 per bushel for the smaller of 40 percent of the allotment or the planted acres times the farm normal yield.

Producers qualified by signing an intention to participate in the program and: (1) planted within the allotment; or (2) substituted wheat for feed grain and/or oats-rye; (3) maintained the farm normal conserving base; (4) planted within other allotment crops on the farm; and (5) planted within the wheat allotment on any other farm on which he had an interest in the wheat crop.

Data for the wheat program by counties are shown on the following page.

Sugar Beet Program

ASCS county offices did not determine proportionate share acreage of sugar beets for 1968. Sugar companies contracted with individual farm operators for the production of a total acreage in accordance with plant capacity and the company marketing quota.

Conditional payments to Oregon producers were \$2.10 per ton of beets for the Umatilla area and \$2.12 per ton for the Malheur area.

Each producer was required to meet the following conditions to qualify for payment. He must have:

- 1 Had a contract with a sugar company.
- 2 Paid fair wages to field workers.
- 3 Complied with child labor laws.
- 4 Paid fair prices to other producers if he was also a processor.
- Notified his ASCS county office of his intention to abandon any acreage of beets damaged by flood, drought, storm, freeze, disease or insects before the beets were destroyed in order to qualify for abandonment and deficiency payments and history credits.

Participation in the 1968 sugar beet program is shown on the following page.

Wool Incentive Program

Under the National Wool Act of 1954, as amended, wool is recognized as an essential and strategic commodity which is not produced in sufficient quantity in the United States. It is the declared policy of Congress as a measure of national security and in the promotion of the general economic welfare to encourage an annual domestic production of approximately 300 million pounds of shorn wool.

To encourage this increased production a support level of 66 cents per pound has been established for the 1967 marketing year. The net price received by wool producers throughout the nation for the wool marketing year of January 1 through the following December 31 is determined. A rate of incentive payment then is computed which is that percentage necessary to increase the national net price received by producers to the 66 cents per pound support level. Payments are made to wool growers by applying this percentage rate to the net price received for the shorn wool marketed by the individual producer during that marketing year. The national average net price received was 39.8 cents per pound. This resulted in a payment rate of 65.8 percent times the net price received by each wool producer.

Incentive payments are made to lamb producers to encourage them to market lambs unshorn, thus contributing to the increase in the production of wool. The unshorn lamb payment is based on 80 percent of the shorn wool payment on a ratio of five pounds of wool per 100 pounds of liveweight. Generally apeaking, the amount of payment is then determined by the increase in weight of unshorn lambs during the ownership of the producer or feeder. This year's rate is \$1.05 cents per hundredweight.

Mohair production is encouraged in the same manner and a support level is established at the same parity level as for wool. The 1966 support level for mohair is 76.4 cents per pound. The national average net price received was 40.9 cents per pound. This requires a payment rate of 86.8 percent times the net price received by each mohair producer.

The following pages outline the activity of the program for 1967.

1957 Crop Fall Potato Diversion Program

Distressingly low market prices for the 1967 fall potato crop generated a need for a program which would divert a quantity of potatoes sufficient to strengthen market prices. A diversion payment program was initiated to encourage producers and processors to divert lower quality potatoes to secondary uses.

To qualify for diversion payment program, a potato producing state or area developed acceptable marketing plans under which only best quality potatoes were sold to consumers and lower qualities were withheld from the retail market and disposed of in secondary outlets. Payments were made to compensate growers for lower prices received in sale of potatoes to secondary outlets, which include manufacture of starch and flour and livestock feeding operations. The diversion payment rates were 75 cents through April 13 and 45 cents through April 30, 1968 for each hundredweight of Specification A potatoes diverted.

During the period of the programs, January 8 through April 30, over 14 million hundredweight nationally were diverted to starch and flour manufacture or livestock feed. And, more than 130,000 hundredweight were purchased for direct distribution to eligible outlets.

The program in Oregon was limited to diversion to livestock feed. Total diversion and other statistics are as follows:

County	Number of Producers	Specification A Diverted Cwt.	Payment
